Fabric Inspection
Fabric inspection is done for defect rate, fabric construction, fabric weight, shrinkage, end-to-end or edge-to-edge shading, color, hand feel, length/width, print defect and appearance. It is done in suitable and safe environment with enough ventilation and proper lighting.

Fabric Relaxing
“Relaxing” refers to the process that allows material to relax and contract prior to being manufactured. The relaxing process allows fabrics to shrink so that further shrinkage during customer use is minimized.

Patternmaking
Our patternmaker creates patterns through 2D or 3D methods according to different styles.

Sampling
Sample making is a significant step in our production flow. Therefore, we strictly monitor our team to produce accurate samples to every customer according to their specification.

Marker
We use advanced computer software to help the technicians create the optimum fabric layout to suggest so fabric can be used efficiently.

Cutting
Basically we use 2 techniques for cutting fabric, fully manual with hand-operated scissor and manually operated straight knife.

Ironing
Before garment assembly, the fabric pieces are transferred to the ironing section for pressing and make sure it is ready to sew.

Sewing
Our experienced sewing worker can finely sew up the garment with various types of advanced sewing machines.

Pressing
After the garments are assembled, they will be transferred to the ironing section for final pressing and enhance the appearance of the garment.

Finishing and Detailing
Some special detailing such as embroidery and beading may need to be done in this step according to different styles.

Quality Control
We highly emphasize on quality control, there are two main aspects we focus to inspect on, which are Material Quality and Manufacturing Quality.

Packaging and Shipping
In the final step, garments are folded, tagged, and packaged according to customer specifications, ensure that garments are well packed and ship to client distribution centers.
Machinery and Equipment

Fabric:
- Inspection machine

Marker:
- Plotter
- Pattern Grading machine

Cutting:
- Straight knife
- Band knife
- Round knife

Sewing Machine:
- Straight Lock Stitch Sewing Machines
- Twin Needle Lock Stitch Sewing Machines
- Blind-stitch machines
- Buttonhole Sewing Machines
- Double Chain Stitch Sewing Machines
- Over lock machines

Ironing Press
- Hand iron

Garment Inspection:
- Needle detector
